Java Developer with experience specializing in Spring Boot microservices and event-driven architectures. Proven track record in migrating legacy systems to modern OAuth2 security and optimizing data processing run-times. Expert in deploying scalable, high-throughput solutions using Kafka and Kubernetes. Regularly use LLMs to enhance deliverables and productivity using agentic, MCPs and local LLMs.

Experience -

- **Infosys** – Senior Associate Consultant - Jan, 2025 - Present
 - Worked on **Developing and Maintaining Api-gateway based applications** using Spring Boot and Spring Security. integrated them with AWS and Kubernetes Container Management tools for scalable, secure and highly available solutions. Proctored using **Splunk, Datadog**.
 - Utilized **local LLMs and open source models** to execute automated testing and validate prompt payload structures prior to utilizing metered, cloud-based AI APIs.
 - Migrated **10+ legacy Oauth1 services** to modern Oauth2 architecture. Additional url for reverse proxy was added
 - **Config Oriented design** structure and enhancement of a large scale application
- **Cognizant** – Software Engineer – Aug, 2021-Nov, 2024
 - **Performance Optimization**, increased efficiency of data processing manual work to **95%** by using a new Spring boot service and event-driven service. From average **3 weeks to mere 5-10 minutes** of program run-time.
 - Performed **Migration to PostgreSQL** from MariaDB
 - Facilitated **new functionalities** in the project as part of a new business merger to extend their capabilities.

SKILLS -

Java, Spring boot, Microservices, Rest APIs, AWS, Apache Kafka, Kubernetes, Git, Maven/Gradle, Splunk, Ollama, llama.cpp

Projects -

- Smart traffic System – Academic - 2017
Using Python and Java to detect Congestion and traffic delays using ML techniques using HMM (Hidden Markov Model) and a form of distance algorithm. Used spatial-temporal measurement to predict the upcoming congestion and its propagation based on mean speed of active vehicles and vehicle-count per minute.
Result: A Google maps like capability to identify traffic and road Relationship during peak hours
- Karm – Personal – 2025-26
A Dual mode(Command Line and Springboot mode) Java application to create work items, project structures. To keep track of projects, progress. A productivity solution for left behind works. Karm - derives from Karam means Work. An application that also stores multimedia data like images, videos

Education -

- Graduate – B.tech – CSE – 2021 – 9.06 DGPA
- Higher Secondary – 83.4 % and Secondary – 86%
